

IntraMaps Enterprise

Integrate, Enrich, Communicate.

Key Features

- Easy to use, intuitive user interface
- Web based application
- Proven robust application with minimal ongoing management requirements
- Easy to install and configure
- API to integrate with 3rd party applications
- Mobile capabilities – access and update real time corporate data in the field
- 3D integration
- Data entry capabilities

IntraMaps Enterprise

Does your organisation have data that you would like to access in a spatial context? Do you have various corporate databases that you would like to access via a central portal?

IntraMaps is a powerful web based GIS data viewer, query and analysis solution designed to link corporate and spatial or mapping data.

Developed over the past 10 years and with over 60 enterprise deployments across Australia and New Zealand, IntraMaps is a robust and proven solution that you can rely on.

Increase Productivity

The main function of the IntraMaps application is to allow users to access relevant and accurate data in a simple and intuitive manner.

IntraMaps provides your decision makers with access to a wide range of corporate data to enable them to make the most informed decision in a timely manner.

Access to integrated corporate information is critical in providing excellence in customer service. IntraMaps allows your Customer Service Officers ready access to information to be able to answer client's queries efficiently.

Our client's have reported statistics that show IntraMaps has significantly improved both productivity and effectiveness in core areas of their business.

How it Works

IntraMaps is a web application built on Ajax and Microsoft ASP.NET web services. It incorporates the latest Web 2.0 architecture with all application software running on the server. IntraMaps can be viewed in all modern web browsers (including iPads) and requires no browser plug-ins.

IntraMaps incorporates a flexible data model that supports the integration of multiple corporate data sources using standard SQL queries. IntraMaps also supports a rich API allowing two way integration with other corporate applications and web services.

Security

Security features in IntraMaps allow the administrator to easily control access to information. Using Active Directory or ODBC database access control, you can manage the security of sensitive data to individual user level.

Administration

IntraMaps is managed via the ConfigManager configuration tool which enables Administrators to easily manage all aspects of the application.

The ConfigManager allows remote administration of an IntraMaps server directly from your desktop PC. The ConfigManager works by running on your workstation and connecting to the IntraMaps server via Web Services.

IntraMaps Mobile

Integrate, Enrich, Communicate.

Access your Data Live in the Field

IntraMaps Mobile gives users in the field access to IntraMaps wirelessly from a Windows Mobile device. IntraMaps Mobile connects to the IntraMaps Server via a wireless LAN or 3G connection.

IntraMaps Public can be easily integrated with an existing web site as a hosted service or implemented directly within your current web server environment.

GPS enabled PDAs allow IntraMaps Mobile to automatically display a map of the current location.

IntraMaps Public has been optimised for ease of use by novice users and includes a simple interface and intuitive navigation tools. IntraMaps Public can be quickly implemented and leverages the same configuration tools as IntraMaps Enterprise.

Users in the field can access functionality such as searching, selecting and reporting on map objects along with having the ability to collect data and update this in real time back to the office.

Support Services

To complement our product offerings DMS have a team of experienced professionals who are committed to providing excellence in customer service to ensure our clients maximise the benefits of their investment in IntraMaps.

Data Entry

A unique and powerful feature of IntraMaps is the ability for users to capture spatial data and add attributes through predefined form templates directly from their web browser.

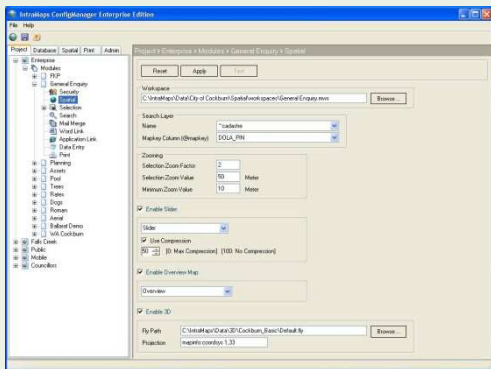

Need more information?

To find out more about IntraMaps or to arrange a demonstration please visit our website at www.mapsolutions.com.au, Email info@mapsolutions.com.au or call 1300 669 973.

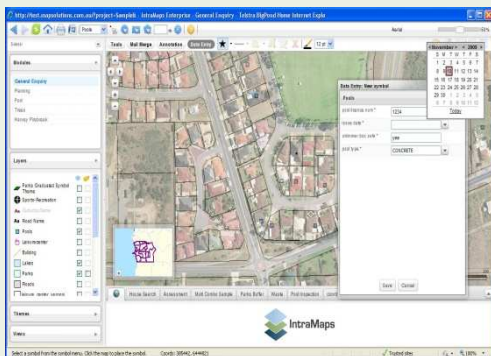

The Data Entry and Annotation functionality provides drawing tools such as symbols, lines, polygons and text boxes.

Public Deployment

IntraMaps Public is a web based portal for the deployment of spatial data to the general public.
